

Views and proposals for improving the nuclear safety framework

Philippe Jamet
ASN Commissioner
France

Views and proposals for improving the nuclear safety framework

- **Immediate response to Fukushima accident**
 - Promotion by IAEA of safety assessment campaigns (“stress tests”) for all nuclear installations seeking harmonization
 - Providing comprehensive information and results in a transparent manner to the public and stakeholders

Views and proposals for improving the nuclear safety framework

- **Assessment of external hazards and plants upgrades**

- Working on methodology for assessing tsunami
 - Need for international review
 - Update of IAEA safety standards and/or national implementation

→ Generalization to other extreme external hazards

- Peer reviews to assess national PSR with special focus on siting and related design and layout upgrades.

**Peer review results
New knowledge
Methodologies**

**IAEA Safety
Standards**

Views and proposals for improving the nuclear safety framework

- **First positive lessons learnt from Fukushima to be considered in IAEA Safety Standards and national implementation**
 - On-site response emergency centre protected against external hazards and radioactive contamination
 - On-site mobile equipments easily connected to provide energy and cooling water
 - Hydrogen risk to be revisited, including accumulation in unexpected locations

Views and proposals for improving the nuclear safety framework

- **Allocation of responsibility for safety**

(IAEA Safety Fundamentals 1 & 2)

- Strengthening international cooperation and peer reviews missions
 - Ex : IRRS missions, report to CNS
- Supporting utilities efforts at the international level to promote their responsibility (Ex: WANO)
- Enhancing experience sharing and promotion of progress between IAEA and industry associations (Ex: WANO peer reviews and OSART)

Views and proposals for improving the nuclear safety framework

- **International cooperation for the recovery of evacuated areas**
 - International mobilization to make the best expertise and methodologies available to Japan
 - Ambitious objectives and corresponding actions to be implemented as soon as possible
 - Support to Japan upon request
 - Commensurate and comprehensive approach (radiation protection, remediation, health monitoring, communication, regulation, financial compensation, etc.)

Remediation in Japan is remediation everywhere
